

## Don't just be online. Be aware.

Standard cellular routers only tell you if your internet connection is active. OptConnect aware™ also tracks temperature, humidity, sound levels, power status, light, and physical movement. If your device detects anomalies in any of these areas, you'll know—instantly.

### What Aware Tracks for You

#### Physical Movement Status

Monitor the physical handling, shifting, or displacement of your device in real time with a built-in accelerometer. If a change in motion occurs, aware alerts you immediately.

#### Environmental Monitoring

Track real-time shifts in temperature, humidity, and sound right inside the Summit platform — and establish environmental norms that tip you off to anything out of the ordinary.

#### Power Status Alerts

Know the instant a power cord is unplugged or power goes out, along with temporary battery backup, a power outage alert, and an automated notification the moment power resumes.

Aware. When You're Not There.™

## What Awareness Looks Like in Summit

### Aware Rapid View™

**What it is:** A multi-sensor timeline chart alongside map coordinates that pinpoint your device's exact location, for critical data at a glance.

**How it works:** Simply select a device inside the Summit platform's Awareness tab to trigger a live session or view recent logs.

### Aware Intelligence™

**What it is:** Machine-learning insights within your ongoing status feeds, discovering what's normal for your device and informing your decisions.

**How it works:** By processing continuous check-in data and ongoing sensor patterns, the Aware Intelligence engine automatically isolates anomalies and flags them without any need for manual system setup.

## The Purpose-Built aware Hardware Series

### neo2 aware

**Primary Capabilities:** Compact 4G LTE Category 4, dual-carrier redundancy, internal battery backup, GPS, and magnetic mounting.

**Target Applications:** Smart safes, financial ATMs, retail kiosks, and high-data vertical applications.

### max aware

**Primary Capabilities:** High-speed 4G LTE Cat 4, 3 paths to internet (Ethernet/WAN, Verizon, AT&T), built-in Wi-Fi, and 4 Ethernet ports.

**Target Applications:** High-traffic retail branch environments, micro markets, and critical failover applications.
